Summary

Senior Software Engineer with 6+ years of experience in Front End development, specializing in Angular and TypeScript development. Proven expertise in designing and implementing optimized, scalable Angular architectures, focusing on performance and maintainability. Extensive experience in setting up CI/CD pipelines using CircleCI, GitHub Actions, and deploying to cloud services and VPS environments. Dedicated to leveraging modern technologies to streamline processes, enhance efficiency, and deliver high-quality, robust applications.

Experience

Senior Software Engineer, Forenax Technologies – Lahore, PK

May 2023 – Present

- Lead Angular development on in-house product SMIELS app.
- Proactively identify and fix Angular UI issues as part of regular UI/UX audits and refactor application logic for better performance and reduce build size.
- Quickly learned LoopBack 4, expanding my contributions to include developing REST API backends.
- Developed Full-Stack Accounting module single-handedly, receiving positive recognition.
- Transitioned to contribute Angular development expertise on the Crypto blockchain- based STORE CLOUD app.
- Collaborated in creating detailed developer documentation for both front-end and back-end, specifically designed to assist new hires during onboarding, helping them quickly set up and start contributing to front-end and back-end development.; also coordinate with team and management on project timelines and tasks.
- Mentor and onboard new hires, focusing on Angular Development best practices.

Senior Software Engineer, Synares Systems – Lahore, PK

Feb 2020 – April 2023

- Architected the Angular frontend of the Tailorlie Brands app from the ground up.
- Achieved cost-efficiency by migrating frontend hosting from EC2 to S3, coupled with CI/CD pipelines via GitHub Actions and CircleCI.
- Authored a foundational Angular boilerplate and documentation, which became the baseline for four ongoing and future projects, standardizing best practices across the development team.
- Collaborated with backend engineers shaping project architecture and REST API schemas.
- Guided junior developers to full-time roles with a 100% retention rate.
- Managed multiple project lifecycles through Jira and Asana, engaging clients with weekly progress demos.

Front-End Engineer, Benshi.ai – Barcelona, ES

July 2022 – Oct 2022 (PT)

- Worked part-time under contract to migrate a Vue 2 UI to the latest Vue 3 framework.
- Swiftly reached an intermediate level in Vue 3 within the first month, tackling and resolving 50% of UI issues from the Linear task board by focusing on bug fixes.
- Actively contributed in migration from Vue 2 to Vue 3, fulfilling core responsibility.
- Revamped more than 20+ custom UI components with HTML, SCSS, and TypeScript, enriching user experience.
- Devised and executed unit and end-to-end tests to fortify application integrity.
- Played a key role in applying Domain-Driven Design (DDD) and hexagonal architecture.

Front-End Developer, Busy Bee Technologies – Lahore, PK

May 2019 - Apr 2020

- Transformed 40+ PSD designs into functional web templates leveraging HTML, CSS, and JavaScript.
- Led mobile optimization for 80% of web templates, increasing accessibility.

- Boosted application speed and scalability, slashing page load times via automation techniques like image optimization and JS/CSS minification using Gulp.
- Conducted training sessions on Gulp automation.
- Initiated the transition from jQuery to Vanilla JavaScript, diminishing bundle size and quickening site load.
- Pioneered the shift to GitHub, refining code management and team collaboration.

.Net Developer, Vision Plus – Lahore, PK

Dec 2018 - Apr 2019

- Managed and customized HMIS features for 2 key client projects (CPTH & HRO), resolving multiple client queries and contributing to 5 modules.
- Authored and maintained clean, scalable and commented code using C#, ASP.Net, HTML, CSS, and JavaScript, while overseeing front-end UI maintenance.
- Pioneered the migration to VSTS for version control, improving project workflow efficiency by 30%.

Education

University Of Lahore, BSc in Electronics and Electrical Systems Engineering

Lahore, PK

Licenses & Certifications:

- Google Project Management – Google Career Certificates
- Angular – The Complete Guide – Udemey
- Front-End Mastery Bootcamp – SkyImpel
- Certified .Net Specialist – EVS Professional Training Institute

Projects

Angular Boiler Plate

github.com/repo

- Developed and maintained angular latest Boiler plate, with auth setup, utilities classes, proper docs, and scalable architecture.
- Tools Used: Angular v18, Typescript

CSV Export Utility NPM Package

npm/package

- Developed typescript utility package to download JSON data in CSV format. Able to use complex JSON data. Weekly 50+ downloads.
- Tools Used: Typescript

Technologies

Languages & Technologies: Typescript, Angular, Sass, Less, Express.js, NestJs, PostgreSQL, GitHub Actions, Docker, Netlify, Vercel, JavaScript, Vue3, Bootstrap, Tailwind, Python Django, Loopback4, MongoDB, Circle CI, AWS (EC2, ELB, S3, Route53, CDN, AES, EB), Heroku, ASP.NET MVC

Software: JetBrains WebStorm, JetBrains PyCharm, Visual Studio Code, GitHub, GitKraken, Notion, JetBrains Rider, Visual Studio Professional (.NET), Android Studio, GitHub Desktop/Cli, Photoshop, Linear, Jira
